

Muhammad Hibatullah Wafi

Junior Penetration Tester · VAPT Consultant · IT Security Consultant

Bekasi, Indonesia · +62 813-1018-1027 · mhibatullahwafi@gmail.com · linkedin.com/in/mhwafi · github.com/mhibx

PROFESSIONAL SUMMARY

Junior Penetration Tester and Security Assessment professional with hands-on experience in web application security testing, vulnerability assessment, and structured security reporting. Holds eJPT, CompTIA Security+, and ISC2 CC — with a practical portfolio covering OWASP Top 10 manual testing, VAPT report writing, OSINT automation, and reconnaissance methodology. Background in CRM administration and technical support (5+ years) provides strong analytical thinking, documentation discipline, stakeholder communication, and process investigation skills that translate directly into security consulting and assessment work. Complementary Blue Team experience with Wazuh SIEM adds a well-rounded attack-and-defence perspective — a differentiator in security consulting roles.

TECHNICAL SKILLS

Web Application Security: OWASP Top 10 (SQLi, XSS, IDOR, Broken Auth, Security Misconfigurations), Burp Suite (proxy, repeater, intruder), manual vulnerability validation, evidence collection

Penetration Testing: Reconnaissance, enumeration, exploitation, post-exploitation basics, Metasploit, Gobuster, Nikto, Nmap (scripting, service detection, OS fingerprinting), Kali Linux

Vulnerability Assessment: Web application VA, CVSS risk rating, finding prioritization, remediation recommendation, structured VAPT reporting, attack surface mapping

OSINT & Reconnaissance: OtoSINT (self-developed), subdomain enumeration, WHOIS, DNS recon, crt.sh, HTTP probing, technology fingerprinting, passive information gathering

Networking: TCP/IP, DNS, HTTP/HTTPS, SSH, basic firewall concepts, network traffic analysis (Wireshark), port scanning

Operating Systems: Kali Linux (primary pentest OS), Ubuntu Linux (server admin), Windows 10/11 (daily use and target assessment)

Scripting & Automation: Bash scripting (OSINT automation), Git/GitHub, VirtualBox, Docker

SIEM & Blue Team: Wazuh (deployed & configured), Windows Event Logs (Event IDs 4625, 4688, 4697, 4720), MITRE ATT&CK mapping — retained for full-spectrum security awareness

LICENSES & CERTIFICATIONS

- **Junior Penetration Tester (eJPT)** · INE Security · Feb 2026 – Feb 2029 [ID: 174443371]
- **CompTIA Security+** · CompTIA · Jul 2026 – Jul 2029
- **Certified in Cybersecurity (CC)** · ISC2 · Apr 2026 – Apr 2029 [ID: 3733908]
- **Mastered Predicate — Web Penetration Testing Bootcamp** · Codelamp Indonesia · 2025
- **Certificate of Excellence — Cyber Security Engineer Bootcamp** · Merdeka Siber Academy · 2025

SECURITY PROJECTS & ASSESSMENT PORTFOLIO

Web Application Penetration Testing — VAPT Reports

- Performed structured web application penetration tests on two simulated targets (Merdeka Bank, Jersey Sekat) following a defined methodology: reconnaissance → enumeration → vulnerability identification → exploitation → evidence collection → reporting
- Identified critical and high-severity vulnerabilities including SQL Injection, XSS, IDOR, and Broken Authentication using Burp Suite and manual OWASP Top 10 testing techniques
- Produced professional VAPT reports per target: executive summary, technical findings, CVSS risk ratings, reproduction steps, supporting evidence, and remediation recommendations
- Demonstrated ability to communicate findings clearly to both technical and non-technical audiences — core requirement for security consulting roles

OtoSINT — Automated OSINT Reconnaissance Toolkit

- Designed and built a Bash-based OSINT automation tool to streamline pre-engagement information gathering: subdomain enumeration, WHOIS, DNS recon, crt.sh integration, HTTP probing, and technology fingerprinting
- Built to replicate real-world reconnaissance methodology — reduces manual effort and improves consistency across assessments; available on GitHub with full documentation

Password Security Research — Authentication & Cryptography

- Built a suite of password security tools demonstrating authentication vulnerability concepts: Weak Password Checker, Strength Analyzer, Hashing Demo (MD5 vs SHA-256 vs bcrypt), and Salted Hashing — directly applicable to assessing authentication controls during web application assessments

Wazuh SIEM Home Lab — Blue Team Perspective (Complementary)

- Deployed Wazuh SIEM on Ubuntu Server with Windows 10 endpoint agent; built detection cases for brute force (T1110), failed login (Event ID 4625), and PowerShell abuse (T1059.001) mapped to MITRE ATT&CK
- Understanding detection logic informs offensive work — enables assessment of whether attacks would evade real-world monitoring, a differentiator in security consulting engagements

Assessment Portfolio: github.com/mhibx

PROFESSIONAL EXPERIENCE

CRM & Marketing Specialist — VCGamers Indonesia

2023 – 2024

- Administered and configured CRM platform across 3 business units — managing user roles, access permissions, data structures, and workflow logic; developed systematic approach to platform investigation and issue documentation
- Provided Tier-1 technical consultation to 50+ internal users; diagnosed and resolved system-related issues with structured escalation procedures and documented resolution steps
- Analyzed system logs and user behavior data to identify anomalies and performance issues — directly transferable to security assessment and log-based investigation work
- Communicated technical findings and recommendations to both technical teams and non-technical stakeholders across product, engineering, and operations

Business Development Associate — VCGamers Indonesia

2022 – 2023

- Investigated operational and platform issues through systematic analysis of user-reported incidents — identified root causes and documented findings with actionable recommendations
- Produced workflow improvement documentation and communicated process gaps to technical and non-technical stakeholders

Merchant Acquisition Lead — VCGamers Indonesia

2021 – 2022

- Provided hands-on technical guidance and training to 100+ merchants during platform onboarding — translated complex system functionality into accessible instruction
- Independently investigated and resolved merchant-reported platform issues; escalated complex cases with structured problem descriptions to engineering teams

Internet Analyst — Lionbridge Technologies Inc.

2019 – 2021

- Evaluated website quality, technical accuracy, and UX across global search platforms — built strong analytical assessment and structured reporting discipline mirroring security assessment methodology

Founder & Principal — Insider Top Up (Self-employed)

2023 – 2026

- Managed full-stack technical operations: website administration, payment gateway integration, CRM, analytics, process automation, and customer support — equivalent to IT generalist/consultant scope
- Handled end-to-end issue investigation and resolution for 200+ monthly transactions; maintained internal process documentation for operational continuity

EDUCATION

Faculty of Economics and Business — Accounting Major

2026 – Present

Universitas Terbuka · Current GPA: 3.29

ADDITIONAL INFORMATION

Languages: English (Professional), Indonesian (Native) · **Career Progression:** Junior Penetration Tester → Security Consultant → Red Team Operator → Application Security Engineer

Currently Learning: Web App Security (Advanced) · API Security Testing · OWASP ASVS · Active Directory Attacks · Windows/Linux Privilege Escalation · Burp Suite Advanced · Nmap Scripting Engine (NSE) · Security Reporting & Remediation
